Best-in-breed Security, Archiving and Continuity Services

Mimecast®

The lower overhead, predictable costs and simplicity of Office365 seems attractive. However, for all its strengths, Office365 as a single provider cannot fully replace the additional security protection, data loss avoidance and uptime assurance provided by essential add-ons to on-premise email systems.

Mimecast's integrated suite of cloud services provides email risk mitigation for Office365 – bridging the gap between single vendor and best-of-breed. Mimecast® products provide defence in depth against targeted threats, strengthen data integrity and provide disaster recovery in the event of a Microsoft® infrastructure outage.

Mimecast Services for Office 365 provide:

- **Mimecast S1** provides comprehensive security coverage with multi-layered, multi-vendor protection, including defence against whaling, spear-phishing and advanced persistent threats.
- **Mimecast A1** gives mailbox level compliant archiving for an independent, verifiable backup of email data that supports legal hold, e-discovery and recovery.
- **Mimecast C1** delivers protection against service outages for uninterrupted employee email access via Outlook for Windows, Mac, mobile apps and web portal.

- **Integrated service bundles M2 and M2A** for improved Office365 security and cyber resiliency.
- **Faster migration** from on-premises systems like Exchange with cloud mailbox archiving and message routing.

Other services for Office 365 include:

- Mimecast Legacy Archive Data Management
- Mimecast Large File Send
- Mimecast Secure Messaging
